Applying Design System to Component Library + Documentation

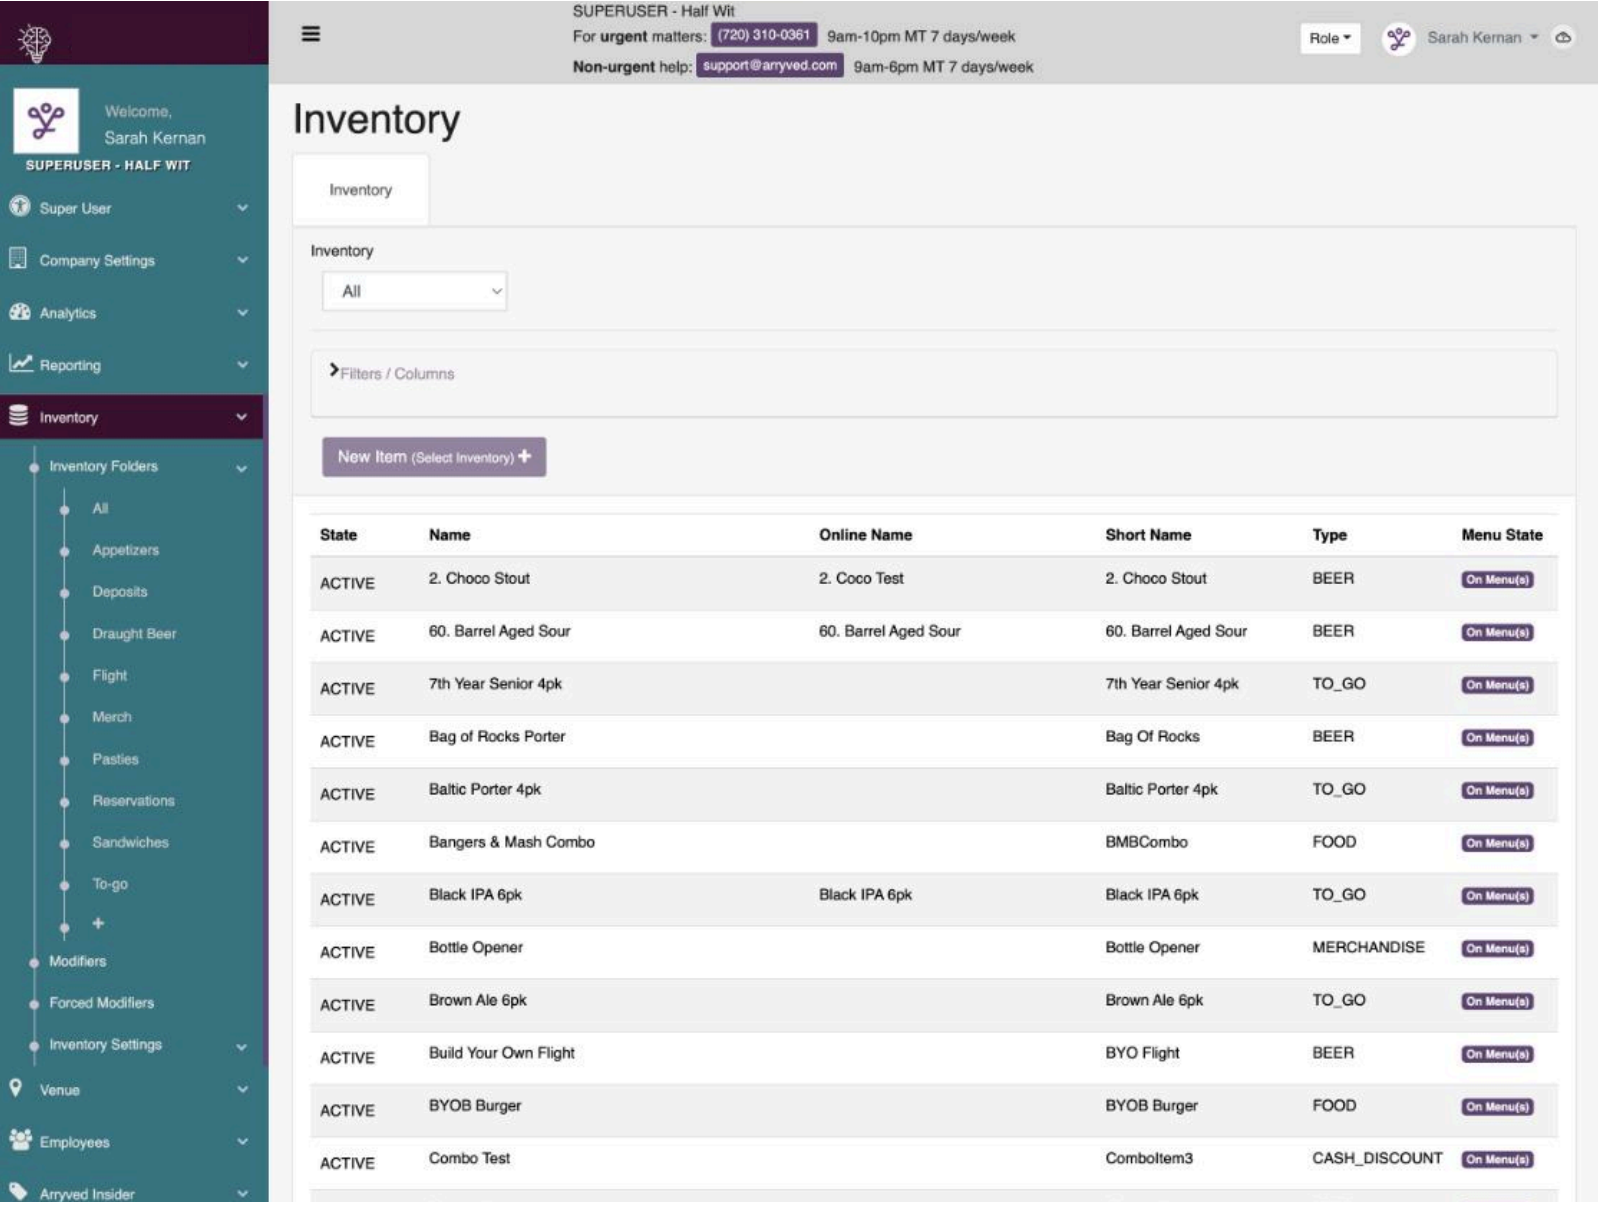

Component Example: Bulk Edit Toolbar

STATE	ATTRIBUTE	REFERENCE TOKEN	VALUE
Default	Background color	ref.color.light-theme.secondary.main	<div></div> #E9E7FF
	Text color	ref.color.light-theme.primary.main	<div></div> #3C136E
	Icon color	ref.color.light-theme.primary.main	<div></div> #3C136E

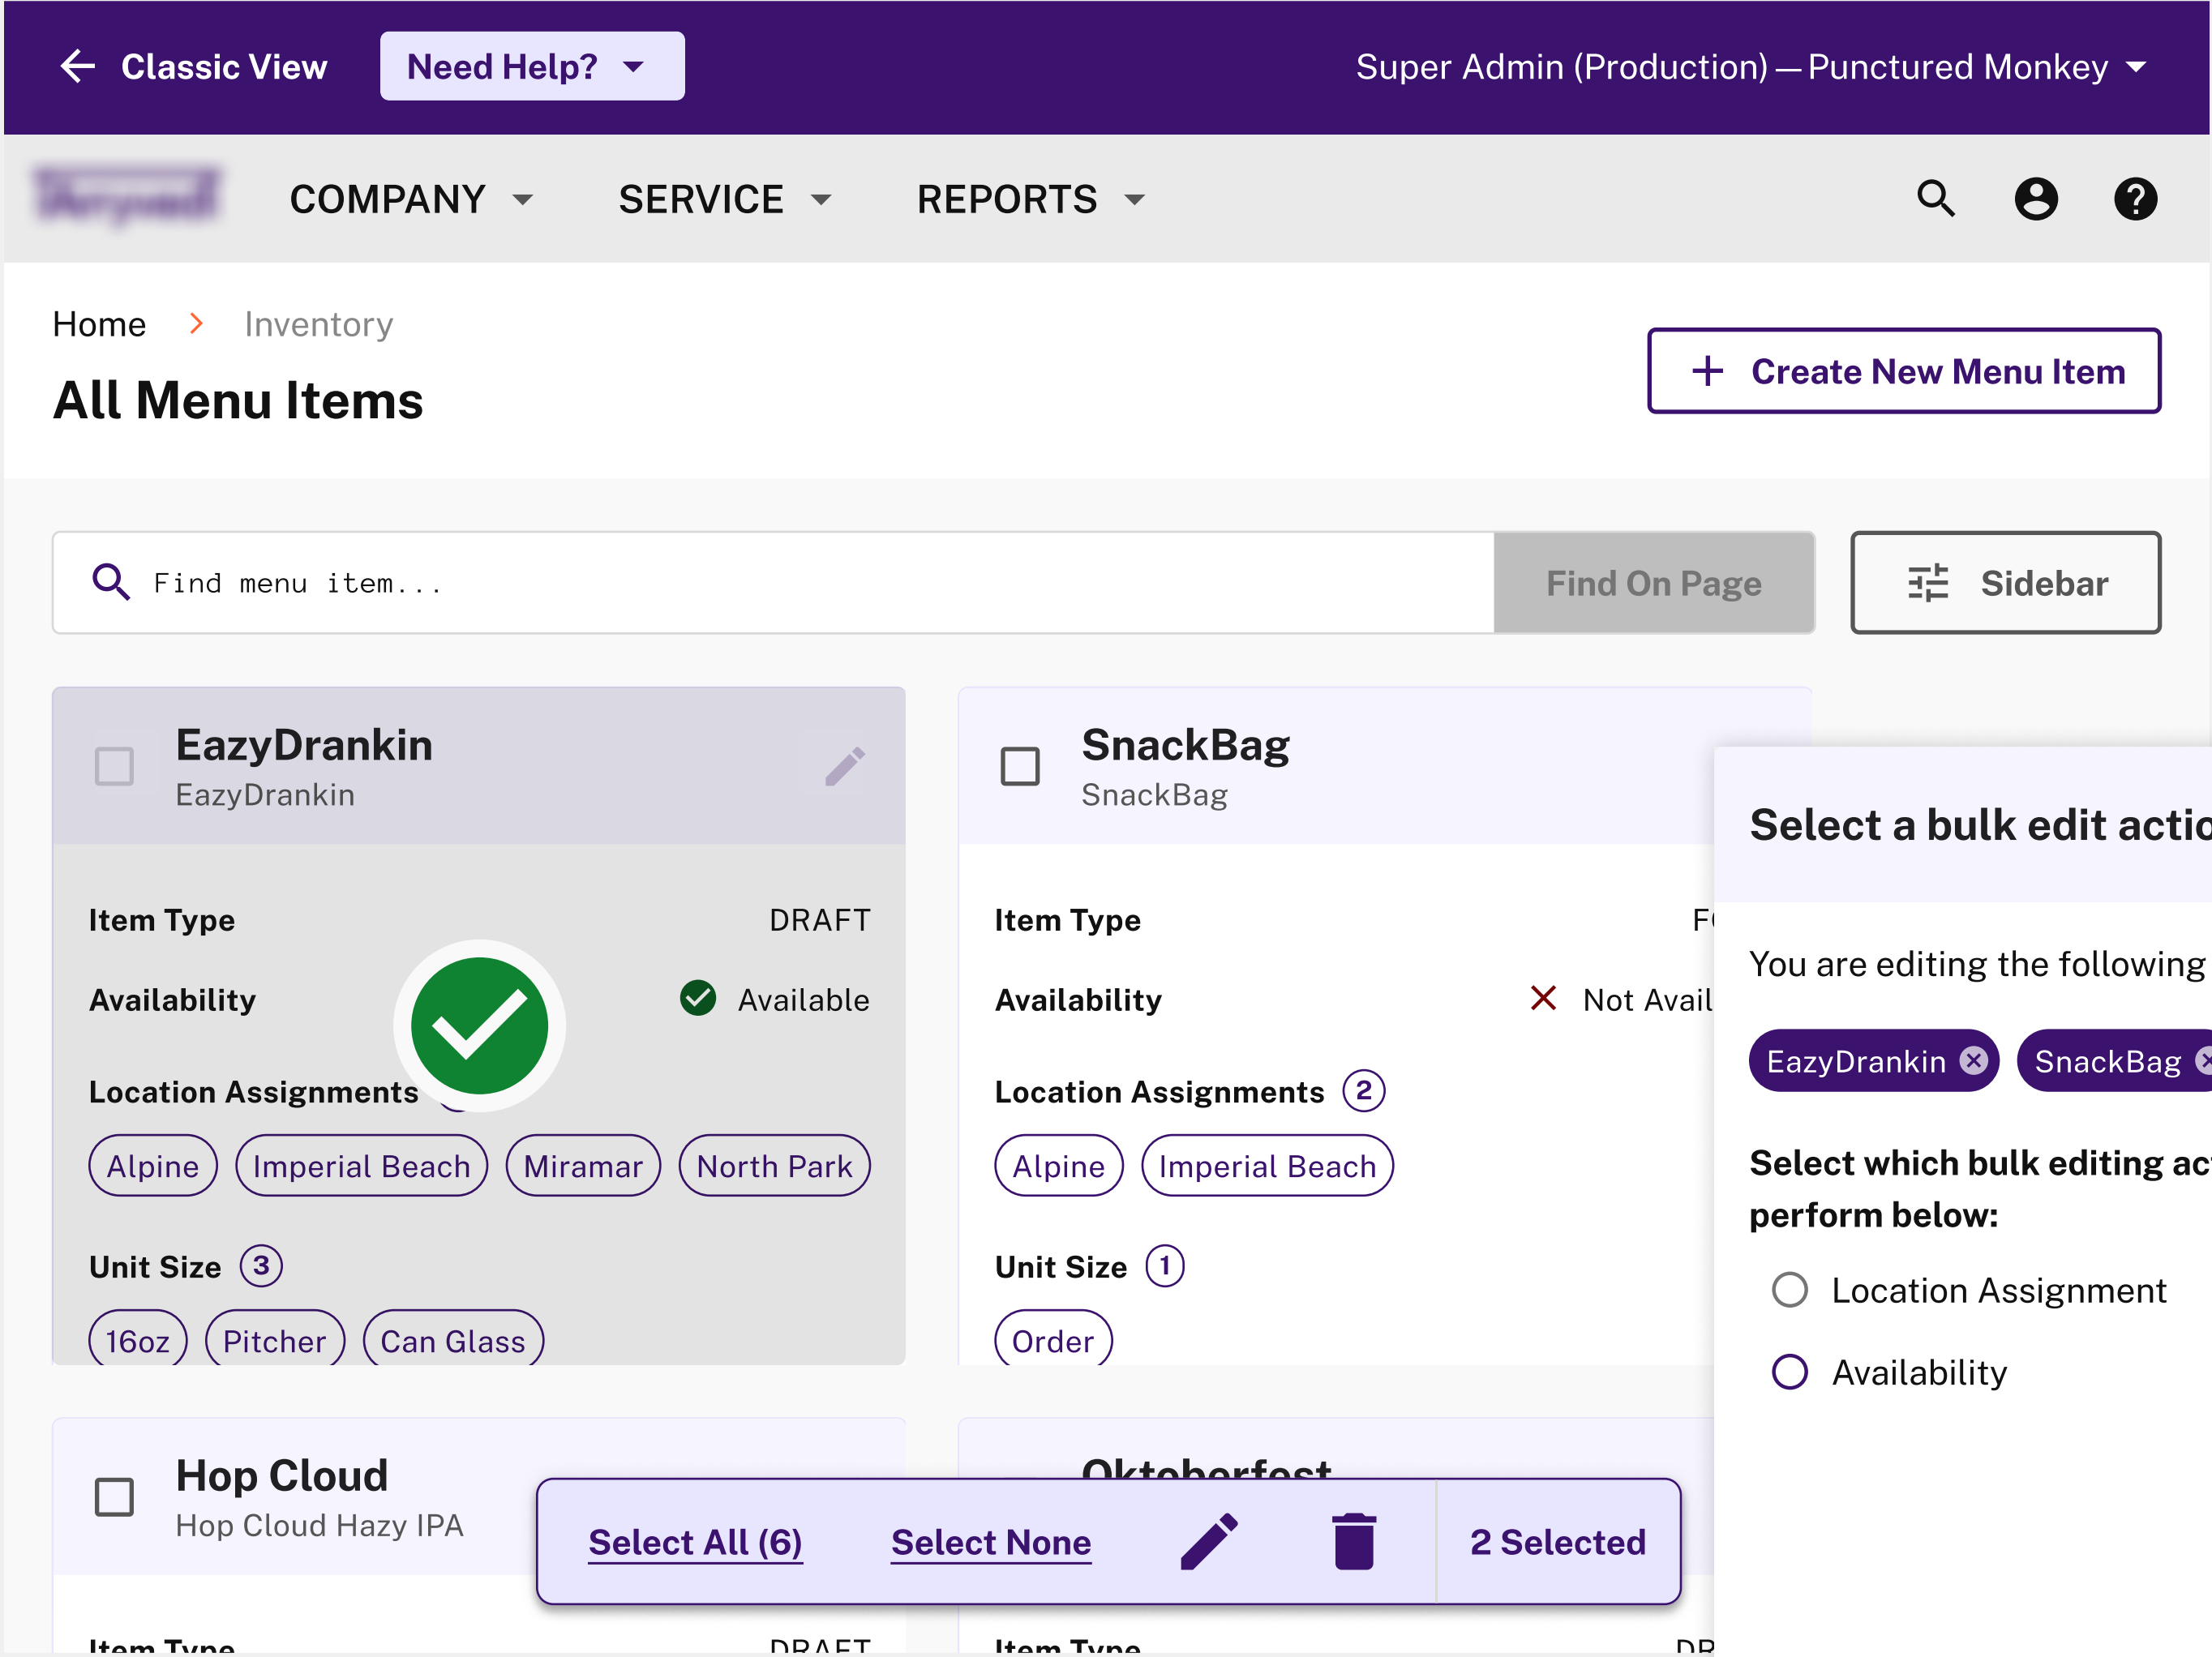

Applying the Design System to Legacy Products

Once the design system was fully established, it was applied to build out product-specific component libraries and modernize existing legacy applications—improving visual consistency, usability, and maintainability.

1 Legacy System

A user-centered audit of the legacy product was conducted to identify pain points, usability issues, and visual inconsistencies. This presented a valuable opportunity to modernize the experience by applying the newly established design system—updating components, streamlining workflows, and aligning the UI with current brand and accessibility standards.

2

Update With Feature Requests

This was also a strategic moment to incorporate feature enhancements based on client feedback, ensuring the updated product addressed real user needs while improving consistency, usability, and development efficiency.
